

Vendor performance readout

Six active vendors, 672 POs, 915 delivered PO lines scored. Built from the ERP extract after correcting its data problems (listed at the end).

THE PHONE CALL

Call Continental Quality Heat Treat first

- **Late most often:** 42% of 134 due lines arrived on time. The other five vendors range from 69% to 99%.
- **Late by the most:** 61 of the 63 lines that arrived more than 7 days late across all vendors are Continental's (\$660k of \$666k received value). When late, the median delay is 17 days (worst 28). Every other vendor lands 99% or more of its lines within 7 days.
- **Warns it will be late, then misses its own date too:** 91% of its confirmations promise a date after our required date (avg +8.5 days; other vendors avg +0.2 to +2.6). It then meets only 58% of its own promises.
- **Not getting better:** 45% on time for lines due Sep–Dec (n=56) vs 40% for Jan–May (n=78). It has been consistently poor, not a recent slip.
- **Material:** \$1.51M received (5.4% of spend) in outside heat-treat services. 7 open lines are past due today (\$14k).

What to ask them	What to fix on our side
• Our planned lead time for heat treat is 19 days from PO; you quote 28 and deliver in 24.5 (medians). Can you commit to a standard lead time we can load into MRP? • When you do confirm a date, you meet it 58% of the time. What is driving the misses: furnace capacity, batching, or incoming parts? • Split shipments: 51% of lines come in more than one shipment. Can partial lots be avoided or flagged?	Beacon side: our 19-day heat-treat lead time is about 9 days shorter than what Continental quotes. Part of this lateness is ours to fix in planning.

Second call, and who to watch

Apex Bar & Tube Co.: the dollar and commercial conversation, not a delivery one.
85% of all received value (\$23.98M). On time 87%, but when late the median is 1 day and 0 lines were more than 7 days late. The issues: (1) BAR-CRES-250 confirmed at +1% from Feb and +2% from Mar while every PO stayed at \$3.92: 11 lines, \$8,522 over PO on ordered qty, and nothing in the ERP captures it. (2) 8 short-shipped balances left open (\$77k, the largest past-due exposure of any vendor). (3) This week's acknowledgments show the same pattern: a dropped line, a short and a +2.3% price.

- **Heritage Cold Heading:** on time 72%, and 60% of promises are after our need date (avg +2.6 days). Delays are short (median 3 days, 2 lines over 7 days). 10 short-shipped balances are still open.

- **Liberty Surface Finishing:** slipping from 95% (Sep–Dec) to 87% (Jan–May). The change is not statistically significant (p=0.13) and misses are 1–3 days, so watch it rather than call.
- **Ostmark Werkzeug GmbH:** on time 69% but never more than 6 days late. Watch the open die-set order PO-4500050027 (25 x TOOL-DIE-9472, \$31k, due 05/15, nothing received). This week’s acknowledgment gives only 'KW 20-22'.
- **QuickShip Industrial:** the benchmark at 99% on time, but only \$13k of spend.

Looking ahead: open orders due in the next 60 days

The same history, turned into a watch list for planning. 80 open lines worth \$3.32M are due between 05/18 and 07/16.

3 lines at high risk of arriving late (\$16k)	26 lines due within 14 days with no acknowledgment on file (\$1.84M)	59 of 63 lines >7 days late in the past that this rule would have flagged
---	--	---

Chase	Apex Bar & Tube Co.	P0 - 4500045787 L1	BAR - CRES -250	\$77k	05/20	none	no confirmation on file

Flag rule: the vendor already promises after our need date, or it has delivered this part on time less than 60% of the time (5+ past lines). Backtested on 8 months without look-

ahead: 33% of flagged lines arrived late, against 22% overall, so treat it as a watch list, not a forecast. Promise dates come from the ERP and from this week's acknowledgments read by the Task 1 tool. "No acknowledgment on file" may partly reflect the ERP confirmation feed stopping on 04/03. Full list: *Open Orders at Risk* tab.

\$28.19M received at PO price, 8.5 months	85% of it from Apex (bar stock)	78% of due lines complete on time, all vendors	63 lines >7 days late: 61 are Continental
---	---	--	---

Received value by month

Net receipts (reversals removed) at PO unit price, in USD. Apex is 85% of the total, so the monthly shape is mostly Apex's bar-stock deliveries.

Month	Apex	Heritage	Liberty	Continental	Ostmark	QuickShip	Total	Receipts
Sep 2025 *	\$0	\$49k	\$9,384	\$55k	\$0	\$1,099	\$114k	56

Total	\$23.98M	\$1.71M	\$108k	\$1.51M	\$867k	\$13k	\$28.19M	1445

Vendor by vendor

Relative rates and absolute counts side by side. A vendor late on many low-value lines differs from one late on a few critical ones. Continental is highlighted.

Vendor	Received value	Share	Due lines	On time	Lines >7d late	\$ >7d late	Median days late (when late)	Promised after need	Met own promise	Past-due open \$	Price above PO \$ (lines)	QC holds (open)
Apex Bar & Tube Co.	\$23.98M	85.1%	222	87%	0	\$0	1	19%	89%	\$77k	\$8,522 (11)	9 (2)
Heritage Cold Heading	\$1.71M	6.1%	205	72%	2	\$5,434	3	60%	82%	\$4,135	–	7 (0)
Continental Quality Heat Treat	\$1.51M	5.4%	134	42%	61	\$660k	17	91%	58%	\$14k	–	7 (1)
Ostmark Werkzeug GmbH	\$867k	3.1%	55	69%	0	\$0	2	20%	71%	\$32k	–	3 (0)
Liberty Surface Finishing	\$108k	0.4%	189	91%	0	\$0	1	20%	94%	\$1,136	–	8 (0)
QuickShip Industrial	\$13k	0.0%	110	99%	0	\$0	1	16%	99%	\$39	–	1 (1)

Apex has the most dollars received late (\$2.51M), because it is 85% of spend. Its late lines are late by a median of 1 day and none exceeds 6 days. Continental's late lines run a median of 17 days. That is why severity, and not raw late dollars, drives the call order.

Is anyone getting worse?

No vendor shows a statistically significant change between Sep–Dec and Jan–May (Fisher exact test, all $p > 0.1$). Continental is flat at a low level. Liberty dipped from 95% to 87% ($p=0.13$).

Continental in detail

By heat-treat service

Service	Due lines	On time	Avg days late (when late)
HT-PRECIP Precipitation harden, per piece	43	40%	16.8
HT-SOLN Solution treat, per piece	46	33%	13.9
HT-STRESS Stress relieve, per piece	45	53%	16.1

Lateness shows up in all three services, not just one.

Lead time, median days from PO date

Vendor	We allow	Vendor quotes	Actual
Apex Bar & Tube Co.	42 days	42 days	40 days
Heritage Cold Heading	33 days	36 days	32 days
Liberty Surface Finishing	18 days	18 days	15 days
Continental Quality Heat Treat	19 days	28 days	24.5 days
Ostmark Werkzeug GmbH	63 days	63 days	61 days
QuickShip Industrial	9 days	9 days	6 days

Other vendors quote within 3 days of the lead time we plan with. Continental quotes 9 days longer, and delivers about 5 days later than we plan.

Apex price creep on CRES 17-4 bar

The only vendor confirming above PO price. Every Apex part other than BAR-CRES-250 confirms at PO price. Receipts carry no price and there is no invoice table in this extract, so the ERP does not record this increase anywhere. AP will meet it on the invoice.

Confirmation month	Lines above PO	Confirmed price	PO price	Exposure (ordered qty)
Feb 2026	4	\$3.9592	\$3.9200	\$1811.04

Confirmation month	Lines above PO	Confirmed price	PO price	Exposure (ordered qty)
Mar 2026	6	\$3.9984	\$3.9200	\$5550.72
Apr 2026	1	\$3.9984	\$3.9200	\$1160.32

Vendor part numbers: the cleanup, started

Two vendors confirm with their own part numbers (241 confirmation rows have a vendor PN and no Beacon part). Joining each back to its PO line recovers a crosswalk. The history exposes three problems a cleanup has to design for:

- **The same vendor PN means different parts at different vendors.** K-1050 is a cold-headed pin blank at Heritage and a heading punch at Ostmark, so the key must be vendor + vendor PN.
- **Vendors renumber.** This week's PDFs use APH-441-0S and OST-CAR-A-100 for parts the ERP knows as APH-4411 and WZ-HM-EIN. A mapping needs first-seen/last-seen dates and a review status, not just a lookup.
- **Look-alikes are real.** APH-441 and APH-4411 are two different blanks (9472-3 vs 9472-4), so fuzzy matching on PNs would merge them. Mappings are proposed from qty and price evidence and approved by a person.

Vendor	Vendor PN	Beacon PN	Source	Status / note
Heritage Cold Heading	APH-441-0S	CHB-9472-4	This week's PDF (inferred by qty+price)	PENDING REVIEW. ERP history uses APH-4411 for this part: vendor renumbered?
Ostmark Werkzeug GmbH	OST-CAR-A-100	T00L-INS-CAR	This week's PDF (inferred by qty+price)	PENDING REVIEW. ERP history uses WZ-HM-EIN for this part: vendor renumbered?
Heritage Cold Heading	APH-125	CHB-3301	ERP confirmations joined to PO lines	Seen 36 times, 2025-09-04 to 2026-03-19
Heritage Cold Heading	APH-318	CHB-7715	ERP confirmations joined to PO lines	Seen 44 times, 2025-09-17 to 2026-04-03
Heritage Cold Heading	APH-441	CHB-9472-3	ERP confirmations joined to PO lines	Seen 30 times, 2025-09-10 to 2026-04-02
Heritage Cold Heading	APH-4411	CHB-9472-4	ERP confirmations joined to PO lines	Seen 35 times, 2025-09-04 to 2026-03-22
Heritage Cold Heading	K-1050	CHB-5520	ERP confirmations joined to PO lines	Seen 41 times, 2025-09-03 to 2026-03-31. Same PN used by another vendor for a different part.
Ostmark Werkzeug GmbH	K-1050	T00L-PUNCH-STD	ERP confirmations joined to PO lines	Seen 18 times, 2025-09-14 to 2026-02-27. Same PN used by another vendor for a different part.
Ostmark Werkzeug GmbH	WZ-9472-DS	T00L-DIE-9472	ERP confirmations joined to PO lines	Seen 20 times, 2025-09-08 to 2026-03-31
Ostmark Werkzeug GmbH	WZ-HM-EIN	T00L-INS-CAR	ERP confirmations joined to PO lines	Seen 17 times, 2025-09-09 to 2026-03-24

The confirmation tool writes every new mapping it infers to this table as *pending review*. After Lisa approves it, it is used automatically. Over time this becomes the vendor-part master, ready to load into the ERP's vendor-part table.

How the numbers were built

The ERP extract has traps that change the answer if taken at face value:

\$28.19M received value, corrected	\$29.50M if reversed keying errors and the unreversed duplicate are counted (+\$1.32M)	\$25.30M if the ERP's own qty_received field is trusted (\$-2.89M)	+\$76k if Ostmark prices were converted from EUR again
--	---	--	---

Data problems found and how each was handled	
Keyed-in-error receipts reversed (RV + the R it cancels)	50 · Dropped both rows for shipment dates/counts; nets to zero for value.
Unreversed duplicate receipts (same line+qty within 7 days, pushes line over ordered)	1 · Excluded: txn 701546
receipt_txn.txn_date format	MM/DD/YYYY · Parsed explicitly; SQLite date() returns NULL on all rows.
po_line.qty_received disagrees with receipt_txn	169 · Field ignored; receipts are the source of truth.
Superseded confirmations	30 · Only the live (latest) confirmation is used.
Confirmation feed ends (last doc_date)	2026-04-03 · Confirmation metrics use POs dated on/before 2026-03-30 only.
Cancelled POs	5 · Excluded everywhere (none have receipts).
Ostmark EUR confirmations / PO price ratio	0.92 · PO prices are USD already; no FX applied to received value.
qc_hold dates before the PO existed	16 · Hold dates unreliable -> holds shown as counts only, not ranked on.
Unused/decoy tables	gl_account, ship_method, user_master, plant_calendar, mrp_message · No link to vendor performance (MRP messages reflect Beacon demand changes).

Metric definitions

Received value	Sum of net receipt qty (R minus reversals; unreversed duplicate excluded) x PO line unit price, bucketed by receipt month. USD. Receipts carry no price, so this is value at PO price, not invoiced cost.
Due lines	Non-cancelled PO lines with required date on/before the as-of date and at least one valid receipt.
On-time %	Due lines whose LAST valid receipt (the one that completes the line) is on/before the required date / due lines.
Severely late	Due lines whose last receipt is more than 7 days after the required date.
\$ severely late	Received value (capped at ordered qty) on severely late lines.
Promised late %	Live confirmations whose promised date is after our required date / lines with a live confirmation.
On-time vs promise	Lines received on/before the vendor's own promised date / lines with a live confirmation.
Lead time (median days from PO date)	Allowed = required - PO date; Quoted = promised - PO date; Actual = last receipt - PO date.
Past-due open	OPEN lines with required date before as-of and received qty < ordered; value = balance x unit price.
Price above PO	Live USD confirmations priced above the PO line; exposure = price difference x ordered qty.
Trend	On-time % for lines required Sep-Dec 2025 vs Jan-May 2026; Fisher exact test p-value (p<0.05 = real change).

What this readout cannot tell you

- Whether any late delivery stopped production or caused a customer expedite: there is no production, downtime or customer-order data in the extract.
- Invoiced cost or price variance paid: receipts carry no price and there is no invoice/AP table. Value is at PO price.
- Quality performance: qc_hold has only 35 holds and 16 are dated before their PO existed, so holds are shown as counts, not ranked.
- Confirmation behaviour after March: the confirmation feed stops at 04/03/2026, so April–May POs have none in the ERP.
- Why required dates are set where they are: if the 19-day heat-treat lead time is a planning default, part of Continental's "lateness" is Beacon's own.
